

Does your child experience any of these problems:

- Difficulties in Reading, Writing and/or Spelling
- Poor handwriting skills
- Dyslexia
- Dyspraxia
- Attention Deficit Disorder
- Concentration problems
- Seems to be disorganised and has difficulty staying on task
- Poor memory
- Difficulty in Mathematics
- Coordination difficulties
- General Academic under-achievement

At BodyLink, we aim to help children with coordination, learning and behavioral difficulties.

It is important to identify the source of the problem as learning is not all in the mind and physical factors could be hindering a child's academic progress.

If your child is having difficulty at school, a full diagnostic assessment will enable us to evaluate and tailor make a programme to suit his/her specific needs.

Many learning, balance and behavioral difficulties can be as a result of Neuro-Motor immaturity. If this is the case, the INPP Programme could help your child.

My name is Michelle Grigg and I offer the INPP programme and the Neurological Integration System. I graduated with a Bachelor of Health Science in 2003 from Auckland University of Technology (AUT). In 2005 I went on to study the Neurological Integration System (NIS) and created BodyLink. Using NIS, I treat everyone from birth to older adults but have a special interest in child health, specifically learning difficulties. In 2013 I decided to do a Post Graduate Certificate in Neuro-developmental Delay with the Institute for Neuro-Physiological Psychology in Chester, UK. For more about me and how BodyLink can help please visit www.bodylink.co.nz
