

What is Measles?

- Measles is a serious disease more contagious than COVID-19 and there is a vaccine (MMR)
- You are at risk if you have not had 2 MMR doses in your lifetime. You may have missed your childhood vaccinations.
- Check your records to see if you have been vaccinated.
- If not, contact your GP, participating Pharmacy or Mass Vaccination Centre to arrange a FREE MMR vaccine.

Measles causes a rash and fever, also in severe cases pneumonia and encephalitis (swelling of the brain)

Mumps causes headaches, fever, swelling of neck and in severe cases meningitis, encephalitis and infertility in young men.

Rubella causes a rash and fever: It is dangerous for unborn babies.
