MARPORT | PRO DOCK

Marport Pro Dock is a new home port for your sensors. A kind of smart charging dock through which various information can be downloaded directly to the sensors.

The sensors notify the Dock if repairs are needed. The Dock contributes to improved safety in the sensors' operations and maximises performance.

The Dock opens up the possibility of developing access to much more information from the sensor than has been the case in the past, but such data can be useful to captains and fishing companies in a variety of ways.

Wall mount – Included in box.

Scan the code to view
video in real time of
Dock in action.

MARPORT.COM

Marport Pro has been in development
for the past 5 years and is designed with
our most demanding customers in mind.
