

BoostEd

Helping children who find it challenging, to focus, think and learn.

Small group in-school courses on "learning how to learn"

In today's world with information at our fingertips, children need to know how to think, process and evaluate information more than ever before. At **BoostEd** our goal is to help children learn the strategies needed, so they can reach their fullest academic and social potential.

Our team of experienced **BoostEd** facilitators are trained in audiology, speech therapy, special needs and teaching. We have combined well-researched programmes and processing techniques to create a unique package that utilises visual, auditory and tactile modalities to enhance cognition and boost self-esteem. We run twice weekly small groups in schools.

In the second half of 2017 the **BoostEd** team ran a successful pilot programme with two groups of children at Orewa Primary School. A great thumbs up for the programme was that all ten children were then re-enrolled by their parents for Term One of 2018. We are currently working with almost double that amount of students at that school.

We are taking enrolments for extra groups, so if you think that your child might benefit from our **BoostEd** programme, please contact us or your school principal to find out if your child can participate.
