Re: SECURE-IBD COVID-19 update #13, now biweekly

Dear Colleagues,

We hope this week's newsletter finds you and your families safe and doing well. As of June 16, there have been 1,511 COVID-19 cases in IBD patients from 50 different countries reported in SECURE-IBD. Although the number of new cases reported to SECURE-IBD has diminished somewhat over the last few weeks (see graph below), we are aware of the continued devastation of this pandemic in parts of the United States (i.e. Arizona, Texas and Florida) and in countries such as Brazil and India and are keeping an eye out for data from these regions.

With over 1500 reported cases, we are now able to do more granular analyses regarding the impact of different medications, used alone and in combination, and look forward to sharing results soon. Additionally, we are collaborating with the rheumatology community pool results across multiple immune-mediated diseases. We are excited to learn faster together.

**Please continue to spread the word about SECURE-IBD to all of your colleagues, locally, nationally, and internationally!**

### **Frequently Asked Questions**

**What is SECURE-IBD?** Surveillance Epidemiology of Coronavirus Under Research Exclusion (SECURE-IBD) is an international, pediatric and adult registry to monitor and report on outcomes of COVID-19 occurring in IBD patients. The registry contains only de-identified data, in accordance with [HIPAA Safe Harbor De-Identification standards](#). The UNC-Chapel Hill Office for Human Research Ethics has determined that storage and analysis of de-identified data does not constitute human subjects research as defined under federal regulations [45 CFR 46.102 and 21 CFR 56.102] and does not require IRB approval.

**How can a provider report a case?** We encourage all IBD providers to report all cases of confirmed COVID-19 in IBD patients, regardless of severity. Reporting should take at most 5 minutes. Please report only confirmed COVID-19 cases, and report after a minimum of 7 days from COVID diagnosis and sufficient time has passed to observe the disease course through resolution of acute illness or death. To report a case of coronavirus, click [here](#)

**Who is organizing this project?** This project is being led by Drs. Michael Kappelman (Pediatric Gastroenterologist) and Erica Brenner (Pediatric Gastroenterology fellow) at the University of North Carolina at Chapel Hill and Dr. Ryan Ungaro (Gastroenterologist), Dr. Manasi Agrawal (Inflammatory Bowel Diseases fellow) and Dr. Jean-Frederic Colombel (Gastroenterologist) at the Icahn School of Medicine at Mount Sinai, New York.

**Are there any partnering organizations/societies?** Official partners include the Crohn's & Colitis Foundation, the International Organization for the Study of IBD (IOIBD), the North American Society for Pediatric Gastroenterology, Hepatology, and Nutrition (NASPGHAN), the European Crohn's and Colitis Organisation (ECCO), the Asian Organization for Crohn's & Colitis, and the Pan American Crohn's and Colitis Organisation (PANCCO). We also acknowledge the promotional support of many local/regional societies and pharmaceutical companies as detailed on [www.covidibd.org](http://www.covidibd.org).
